

# EREN ERDOĞAN

## PROFESSIONAL SUMMARY

First of all, I started by learning HTML, CSS and Javascript and improved myself with many lessons, courses and videos on C#. To further improve my algorithm and problem-solving skills, I practice every day from sites such as exercism.org and haccerrank.com. Apart from the projects I mainly did in C#, I also created and developed projects in JavaScript. Meanwhile, I focused on React, Bootstrap and JQuery. I improved my ASP.Net skills with the projects I did mainly on .net. I have reinforced what I have learned theoretically through many projects that I have undertaken and developed individually, and I continue to reinforce it. I gain experience and practice thanks to the many projects I do and participate in as a freelance and volunteer.

To sum up, with a strong foundation in .Net (C#), a wide range of frontend development, experience in database operations, competence in API integrations and mastery of software engineering principles, you can make a valuable contribution to your projects.

## SKILLS

Technical Skills : C# (Advanced) , JavaScript , XML , HTML , CSS , SQL, React, Bootstrap

## CERTIFICATES (Have many certificates)

ASP.Net Core Web API -JavaScript Intermediate – C# Intermediate - SQL Intermediate -React JS

## WORK – EXPERIENCE HISTORY

### SELF STUDY (January 2023-)

First of all, I started by learning HTML, CSS and Javascript and improved myself with many lessons and videos on C#. To further improve my algorithm and problem-solving skills, I practice every day from sites such as exercism.org and haccerrank.com. Apart from the projects I mainly did in C#, I also created and developed projects in JavaScript. Meanwhile, I focused on React, Bootstrap and JQuery. I improved my ASP.Net skills with the projects I did mainly on .net. I have reinforced what I have learned theoretically through many projects that I have undertaken and developed individually, and I continue to reinforce it. I gain experience and practice thanks to the many projects I do and participate in as a freelance and volunteer.

### ONLINE EVENT PROJECT (ASP.NET CORE WEB API) Techcareer Bootcamp

- Writing code in accordance with Solid principles in C# (MVC and Web API) with N-Tier architectural structure.
- Coded websites using HTML, CSS, JavaScript – React languages.
- Create powerful Content Management Systems to serve as interface for client.
- Build databases and table structures following architecture methodology for web applications.
- Using SQL with entity framework for database.
- I practically applied the use of design patterns.
- The project was developed by performing security operations.
